

Empower Vocabulary

Teachers' Guide — read once, keep handy.

1. Signing in

Go to <https://empower-vocabulary-practice.web.app>. Click **Sign In**. Use your @fsm.edu.tr email and your password.

If this is your first time after the recent update

You may briefly land on the student dashboard. That is normal — every account starts as a student. Tell Alireza once and your account will be switched to teacher. Then log out and log back in. After that you will always land on the teacher dashboard.

2. Helping a student who cannot log in

Almost every student support question is one of these three. The fix is in front of you.

"I registered but it just shows a Verify your email message."

They did not click the verification link yet. Tell them: open their inbox, find the email from noreply@empower-vocabulary-practice.firebaseio.com, click the link inside, then return to the app and sign in. Tell them to check spam.

"I never got the verification email."

On the login page, have them type their email and password and click **Sign In**. The Verify panel appears with a **Resend email** button. Click it, enter the password again, and a new email is sent. They wait 1 minute and check inbox + spam.

"It says 'Only FSM email addresses can register'."

They are trying to register with a personal email like Gmail. Only @fsm.edu.tr and @stu.fsm.edu.tr addresses work. If they need to try the app without an FSM email, give them one of the demo accounts (see section 4 below).

3. What's new since the security update

Three changes you should be aware of. None of them require you to do anything.

- **Every new student must verify their email** before they can sign in. The link expires after a while — if a student waits too long, have them click **Resend email**.
- **You cannot read another student's answers** in classroom sessions. This is a deliberate anti-cheating change. You can still see scores, statistics, and progress — but raw answers are now private to each student (and to teachers viewing their own classroom).
- **Anyone trying to break in is blocked**. Direct URL access to the teacher dashboard, API-level role hacking, and registering with a non-FSM email all fail at the database level. You do not have to worry about misconfigurations on the student's side.

4. Demo accounts

Three shared demo accounts exist for visitors who want to see the platform without registering. The credentials live with Alireza (in DEMO-CREDENTIALS.pdf). You do not normally hand them out yourself — Alireza does, on request.

You may occasionally see "Demo Account 1", "Demo Account 2", or "Demo Account 3" appear in a classroom roster. That is a visitor exploring. They cannot submit answers and they do not affect your real student data. Ignore them.

5. When to contact Alireza

Contact Alireza for any of these:

- You logged in but landed on the student dashboard and you should be a teacher.
- A student cannot log in even after clicking the verification link.
- Someone is showing up as a teacher who should not be.
- A demo account credential needs to be rotated.
- Anything looks wrong, weird, or unexpected.

Email: akabiriaslifar@fsm.edu.tr

Important

Do not try to fix issues yourself in the Firebase Console. The security rules are strict on purpose — well-meaning manual edits can break logins for the whole class. Tell Alireza what you tried to do and what you saw on screen.
